Hong Kong Biomass (Wood) Collect and Recycle Company Limited

溫室效應、厄爾尼諾現象，全球氣溫急劇暖化，以至南北極圈的冰塊融化導致海水水位上升等問題，與人類大規模伐林有關。人類的文明建設彷彿帶來了無窮無盡的環境問題。

香港生物質（木材）環保有限公司為廢木材提供回收再造的機會，所收集的廢木材經過破碎、篩選、擠壓後轉化為一種可再生能源產品－木煤，減少砍伐樹林，一點一滴保存我們共同擁有的

綠色森林。

Greenhouse effect, El Nino, global warming, and the rise of sea level caused by the melting of polar ice caps, are all related to large-scale deforestation caused by human activities. The expansion of human civilization seems to cause nothing but endless environmental problems.

Hong Kong Biomass (Wood) Collect and Recycle Company Limited offers an opportunity to recycle waste wood. The collected waste wood will be turned into wood pellet, a renewable energy product,

via crashing, sieving and briquetting processes, with a view to reducing further deforestation and preserving our remaining forests.
